

# Algebra Geometry Glossary - Vietnamese

## Từ Điển Hình Học Đại Số

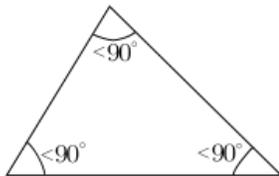

1) **acute angle / góc nhọn**

an angle less than  $90^\circ$

2) **acute triangle / tam giác nhọn**

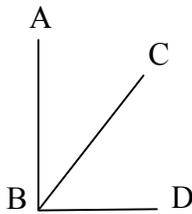

a triangle where all angles are less than  $90^\circ$

3) **adjacent angles / góc kề**

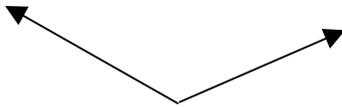

angles that share a common leg

Example:  $\angle ABC$  and  $\angle CBD$  share the leg  $\overline{BC}$ .

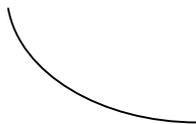

4) **angle / góc**

two lines, segments or rays with a common point that form an opening

5) **arc / cung**

part of a circle

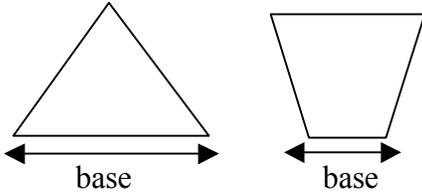

6) **area / diện tích**

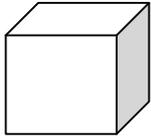

a measure of the inside of a shape

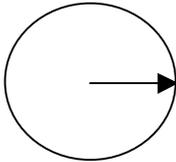

- 7) **base / cạnh đáy**  
the bottom of a geometric shape

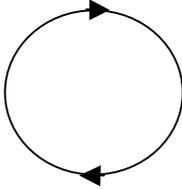

- 8) **box / hình hộp**  
a rectangular shape with six sides

- 9) **circle / vòng tròn**  
a closed loop that is an equal distance from a center point

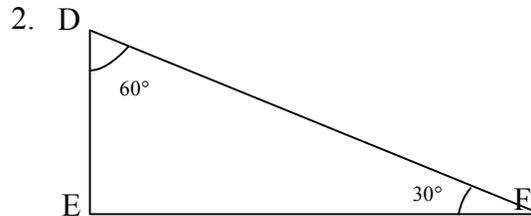

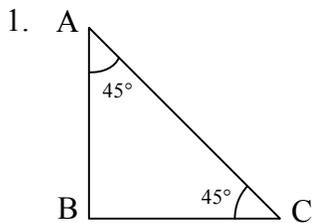

- 10) **circumference / chu vi**  
the distance around the edge of a circle

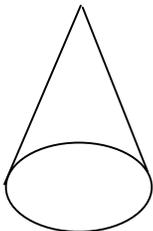

- 11) **complimentary angles / góc phụ**  
two angles that total  $90^\circ$

Example 1:  $\angle A$  and  $\angle C$  are complimentary because  $45^\circ + 45^\circ = 90^\circ$   
Example 2:  $\angle D$  and  $\angle F$  are complimentary because  $60^\circ + 30^\circ = 90^\circ$

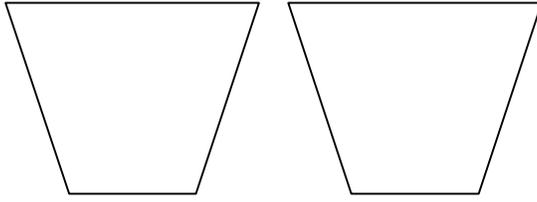

- 12) **cone / hình nón**  
a geometric shape that tapers smoothly from a flat, round base to a point

13) **congruent / đồng dạng**

two geometric shapes that have the same angles or size

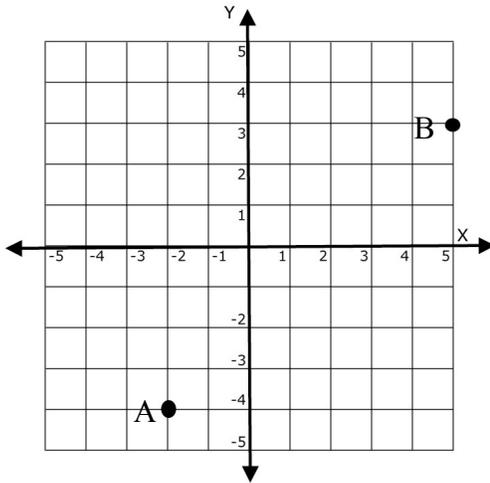

Example: These two shapes are congruent. They are the same size and have the same angles.

14) **coordinates / tọa độ**

a pair of numbers that locate points on a grid

Example: In this grid the coordinates of A are (-2, -4) and of B are (5, 3).

15) **coordinate geometry / hình học tọa độ**

geometry of points on a grid

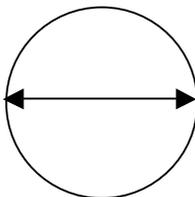

16) **cylinder / hình trụ**

a geometric shape that is circular with flat ends

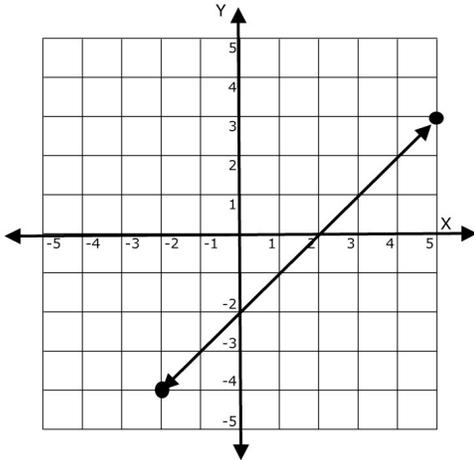

17) **diameter / đường kính**

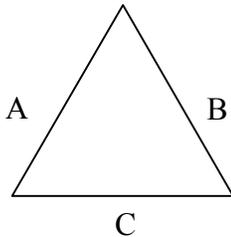

the distance across a circle through the center point

- 18) **distance between points / khoảng cách giữa hai điểm**  
the space between points measured on a geometric grid

- 19) **equilateral triangle / tam giác đều**  
a triangle with all 3 sides of equal length  
Example: Side A = side B = side C.

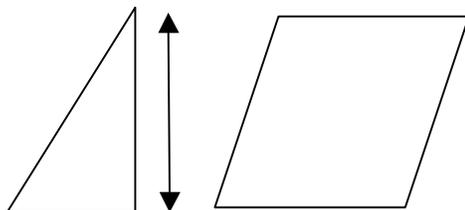

- 20) **equivalent / bằng nhau**  
equal to, the same as

- 21) **exponents / số mũ**  
a small number written to the right and above another number, to indicate the number of times to multiply it by itself  
Example:  $5^3 = 5 \times 5 \times 5$

- 22) **figure / hình**  
a geometric shape  
Example: A square or a circle is a figure.

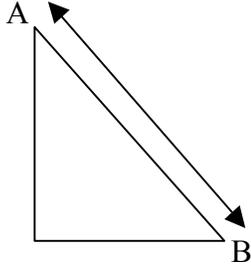

- 23) **formula / công thức**  
a number sentence or equation  
Example: The area of a rectangle = length x width.

- 24) **height / chiều cao**  
the distance from the bottom to the top of a figure

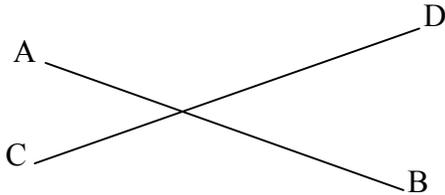

- 25) **horizontal / nằm ngang**  
parallel to the horizon, across the page  
Example: This line is horizontal.
- 

- 26) **hypotenuse / cạnh huyền**  
the long side of a right triangle  
Example: Side  $\overline{AB}$  is the hypotenuse.

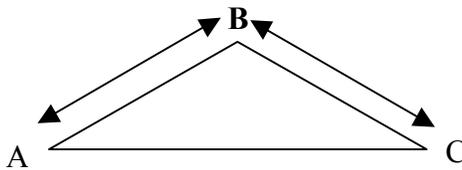

- 27) **identical / đồng nhất**  
the same

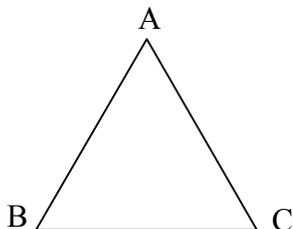

- 28) **intersecting lines / những đường cắt nhau**  
two lines that cross  
Example: Segment  $\overline{AB}$  intersects segment  $\overline{CD}$ .

- 29) **isosceles triangle / tam giác cân**  
a triangle with 2 equal sides  
Example: In this triangle side  $\overline{AB}$  equals side  $\overline{BC}$ .

- 30) **legs / cạnh của hình tam giác**  
the lines that form a triangle  
Example:  $\overline{AB}$  is one leg,  $\overline{AC}$  is another leg and  $\overline{BC}$  is the third leg.

31) **length / chiều dài**

the distance from one end point to another the longer way

32) **line segment / đoạn thẳng**

a line with two end points

Example:  $\overline{AB}$  is a line segment.

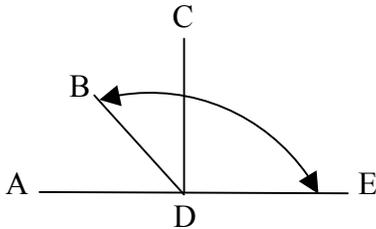

33) **math expression / phương trình toán học**

number sentence or formula

34) **obtuse angle / góc tù**

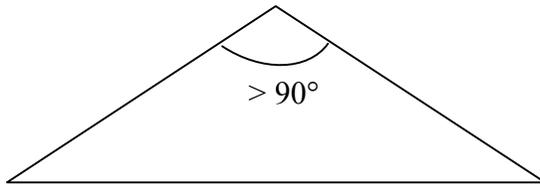

an angle that is larger than  $90^\circ$  but less than  $180^\circ$

Example:  $\angle BDE$  is obtuse because it's larger than  $90^\circ$  and less than  $180^\circ$ .

35) **obtuse triangle / tam giác**

a triangle with one angle larger than  $90^\circ$

36) **order of operations / thứ tự các cách tính**

the correct order to do math operations in a formula

Example: Do multiplication and division first, and then do addition and subtraction, unless they are in parentheses ( ).

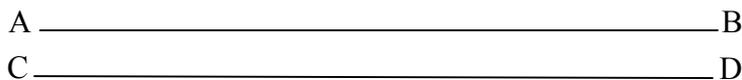

To solve the problem  $3 + 4 \times 2 = N$  first do step 1:  $3 + (4 \times 2) = N$ .

then do step 2:  $3 + 8 = 11$ .

37) **parallel lines / đường song song**

two lines that are parallel and equidistant

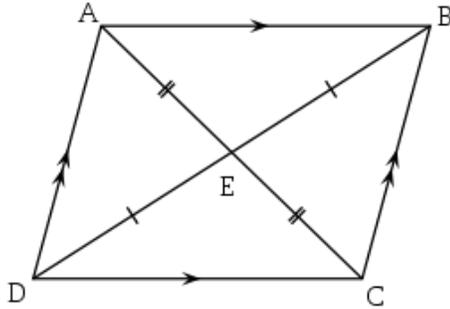

Example: Line  $\overline{AB}$  and line  $\overline{CD}$  are parallel.

38) **parallelogram / hình bình hành**

a quadrilateral with both pairs of opposite sides parallel and equal in length.

Example: Sides  $\overline{AB}$  and  $\overline{DC}$  are parallel and equal in length, and sides  $\overline{AD}$  and  $\overline{BC}$  are also parallel and equal in length.

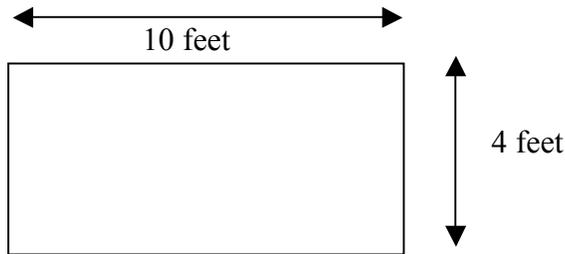

39) **perimeter / chu vi**

the distance around a shape

Example: The perimeter of a rectangle = 2 x length (10 feet) + 2 x width (4 feet)

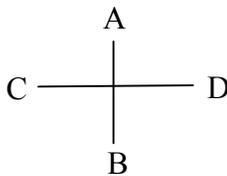

The perimeter of this rectangle is 28 feet.

40) **perpendicular lines / những đường thẳng góc**

two lines that cross forming  $90^\circ$  angles

Example: Line  $\overline{AB}$  is perpendicular to line  $\overline{CD}$ .

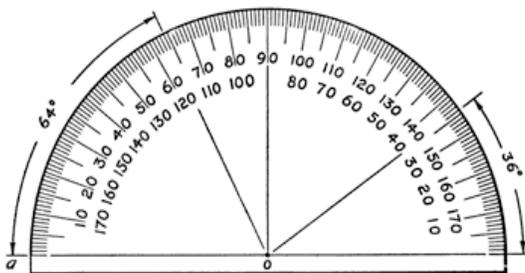

41) **pi ( $\pi$ ) / số pi**

the mathematical constant value is approximately 3.14

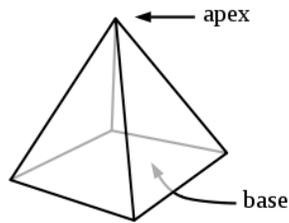

42) **protractor / thước đo góc**

an instrument used in drawing and measuring angles

43) **pyramid / hình chóp**

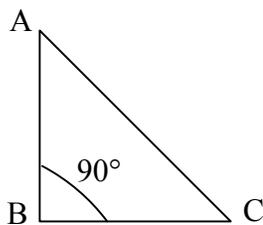

a solid object where the base is usually a square and triangular sides meet at the apex (top).

44) **Pythagorean relationship / liên hệ theo định luật Pythagore**

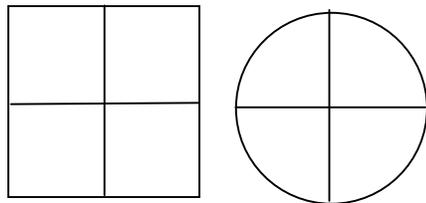

The formula for right triangles states that the square of the longest side (the hypotenuse) is equal to the square of the other 2 sides.

Example:  $\overline{AB}^2 + \overline{BC}^2 = \overline{AC}^2$

45) **quadrant / góc phần tư**

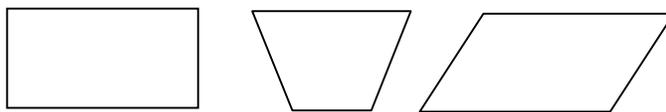

any of the 4 areas created by dividing a square or circle with horizontal and vertical lines

46) **quadrilateral / có bốn cạnh, hình tứ giác**

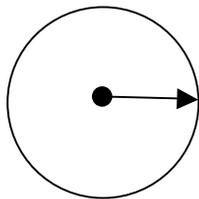

a four sided shape

Example: These are all quadrilaterals.

47) **radius / bán kính**

the distance from the center to the edge of a circle

48) **ray / tia**

a line with a starting point but no ending point.

49) **reciprocal / số đảo ngược**

the reciprocal of a number is 1 divided by that number.

Example:  $1 \div 2 = \frac{1}{2}$ . The reciprocal of 2 is  $\frac{1}{2}$ .

50) **rectangle / hình chữ nhật**

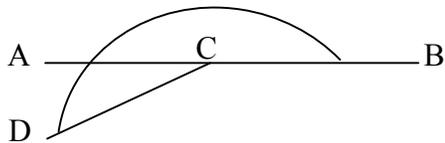

a 4-sided shape where all interior angles are  $90^\circ$

51) **reflex angle / góc phản xạ**

an angle more than  $180^\circ$

Example:  $\angle DCB$  is a reflex angle.

52) **repeating pattern / kiểu mẫu lặp lại**

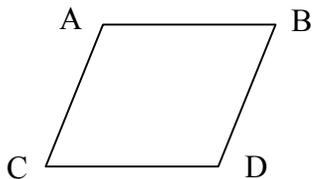

numbers that follow in order from a mathematical operation

Examples: 1, 3, 5, 7, 9 etc. is pattern, and so is 2, 4, 8, 16, 32, etc.

53) **rhombus / hình thoi**

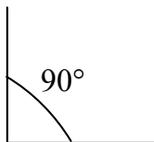

a quadrilateral with all four sides equal in length

Example: In this figure side  $\overline{AB} = \text{side } \overline{BD} = \text{side } \overline{AC} = \text{side } \overline{CD}$ .

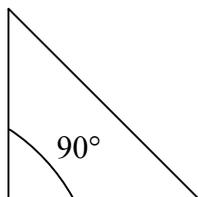

54) **right angle / góc vuông**

a  $90^\circ$  angle

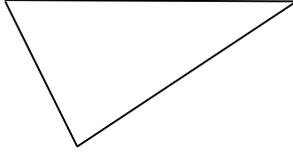

55) **right triangle / tam giác vuông**

a triangle with one  $90^\circ$  angle

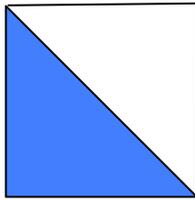

- 56) **scalene triangle / tam giác không đều**  
a triangle where all three sides are different in length

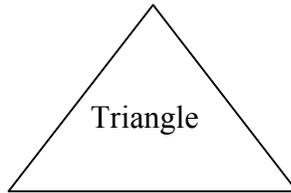

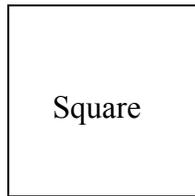

- 57) **sequence / dãy số**  
numbers in a pattern  
Example: 2, 4, 6, 8, etc.

- 58) **set of numbers / tập hợp số**  
a group of numbers used in an equation

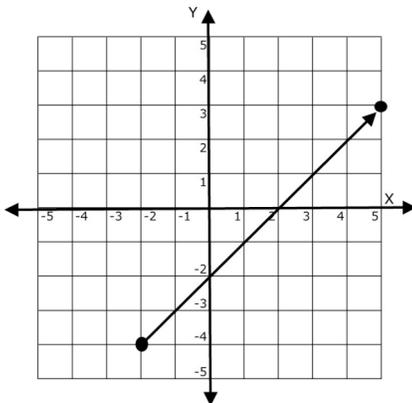

- 59) **shaded / được tô đậm**  
colored or darkened  
Example: Half of the square is shaded.

- 60) **side / cạnh**  
one part of the geometric shape  
Example: A square has 4 sides and a triangle has 3 sides.

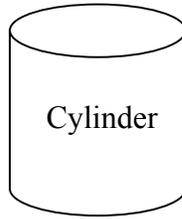

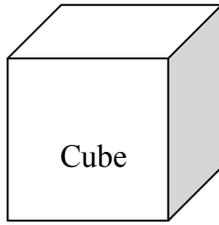

- 61) **slope of a line / độ dốc của đường thẳng**  
an expression of the amount a line goes up or down as a ratio of the change in y over the change in x  
Example: This line goes up 1 on the y axis for every 1 on the x axis. The slope is 1:1.

62) **solid / hình khối**

a three dimensional geometric shape

Example: A cube is a solid and a cylinder is a solid.

63) **square / hình vuông**

a four sided shape with four  $90^\circ$  angles and sides of equal length

64) **square root / căn hai**

a number that when multiplied by itself equals a given number

Example: 5 is the square root of 25 because  $5 \times 5 = 25$

65) **straight angle / góc thẳng**

an angle of  $180^\circ$

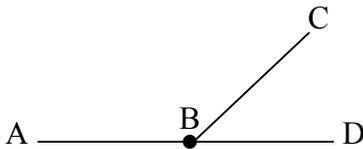

Example:  $\angle ABC$  is  $180^\circ$

66) **supplementary angles / góc bù**

two angles that total  $180^\circ$

Example:  $\angle ABC + \angle CBD = 180^\circ$

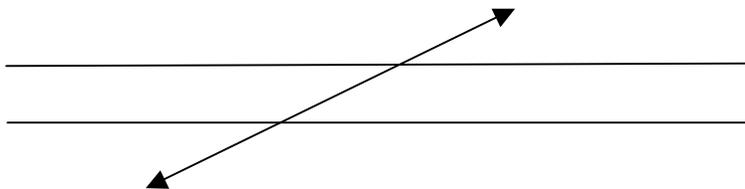

67) **the power of x / lũy thừa x**

indicating the number of times to multiply a number by itself

Example: 2 to the power of 3 =  $2^3 = 8$

68) **transversal / đường ngang**

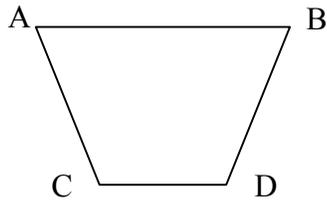

a line that cuts across two or more (usually parallel) lines

69) **trapezoid / hình thang**

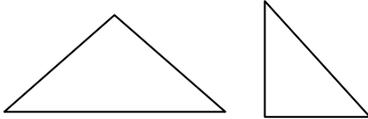

A quadrilateral with only one pair of parallel sides

Example: Side  $\overline{AB}$  is parallel to side  $\overline{CD}$  .

70) **triangle / tam giác**

a three sided shape

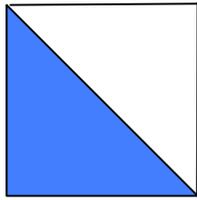

71) **true / đúng, thật**

a mathematically correct answer

72) **unshaded / không tô đậm**

not colored or darkened

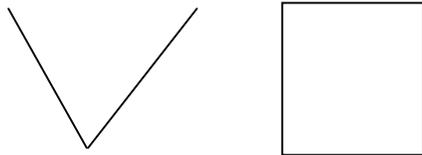

Example: Half of the square is unshaded.

73) **vertex / đỉnh, chóp**

the common end points of two lines

Example: An angle has one vertex, a square has 4 vertices.

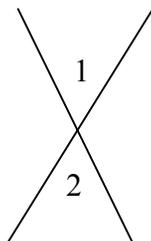

74) **vertical / thẳng đứng, dọc**

up and down in direction

75) **vertical angles / góc đối đỉnh**

two non-adjacent angles with the same measure, formed when two straight lines cross

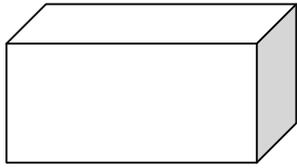

Example:  $\angle 1$  and  $\angle 2$  are vertical angles.

76) **volume / dung tích**

the amount of space inside a three dimensional geometric shape

Example: The volume of a rectangular solid is the length x width x height.

77) **width / chiều rộng**

the distance from side to side the shorter way
